EXPERIENCE

TECHNICAL SUPPORT INTERN

At Optima Professional services
24-July-2023 → 9-Aug-2023

As an intern, I learned about the network and how it works and about the security and also learned how to start some appliances to secure and manage a specific network.

NETWORKS INTERN

At Egas
9-July-2023 → 20-July-2023

As an intern, I learned about how the company network works and how they secure it using their appliances and servers and made a presentation demonstrating what I learned from them.

ORACLE SQL DEVELOPER INTERN

At Modern Gas
8-Aug-2022 → 22-Aug-2022

As an Intern, I learned how to use Oracle SQL how to make an app using it, and how to manage the database.

EDUCATION

Misr International University
Computer science
GBA: 2.32
Sep - 2019 → Jun - 2024

Farabi Language School
Degree: 75%
2006 - 2019

SKILLS

C++
Python
Flutter
Java
Web Development
Github
Jira
Figma

EXAMPLE PROJECTS

- Graduation Project (Gestify) [GitHub Link](#)
  In this project, an app was made to be able to control your laptop using hand gestures that are captured using your laptop camera or phone camera the project was made using Python.

- Aqary (Mobile App) [GitHub Link](#)
   In this project, we made an application using Dart and Flutter to make an app to buy/sell and also manage your apartments.

- Fire Service Provider (ERP) [GitHub Link](#)
   In this project, Fire Protection Service Provider is an enterprise resource planning web application made using Laravel following the MVC pattern (Model, View, and Controller)

- Restaurant Management System [GitHub Link](#)
   This is a system that has various features for both customers and the owner. The owner has a lot of abilities, like editing the menu and adding employees and tables. The customer can reserve a table at a specific time using the system and can then choose one of the three main branches according to the location they desire. Once the customer chooses a branch, he's redirected to choosing his main courses of food.
